AAF22373 to AAF22421 encode the human secreted proteins given in AAB63134

to AAB63182. AAB63183 to AAB63231 represent more human secreted proteins
and polypeptides homologous to them. Human secreted proteins have
activities based on the tissues and cells the genes are expressed in.

Examples of activities include: immunosuppressive; antiarthritic;
antifhreumatic; antiproliferative; cytostatic; cardiant; vasciropic;
cerebroprotective; nootropic; neuroprotective; antibacterial; virucide;
cerebroprotective; nootropic; neuroprotective; antibacterial; virucide;
cused to prevent, treat or ameliorate a medical condition in e.g. humans,
mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are
also used in diagnosing a pathological condition or susceptibility to a
pathological condition. Disorders which are diagnosed or treated include
autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
disorders e.g. ordiac arrest, cerebroascular disorders e.g. cardiovascular
clischaemia, angiogeneals, nervous system disorders e.g. Alzheimer's
disorders e.g. cardiac arrest, cerebroascular disorders e.g. Alzheimer's
disorders e.g. cardiovascular cliverior en also be used to
aid wound healing and epithelial cell proliferation, to prevent skin
aging due to sunburn, to maintain organs before transplantation, for

5,
                                           of
supporting cell culture of primary tissues, to regenerate tissues and chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. AAP22364 to AAP22372 and AAB63133 represent sequences used in the exemplification the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        918

                                                                                                                                                                                              The present sequence for human diagnostic and therapeutic (dithp) cDNA sequence #42 is 1 of 71 (AAS03012-AAS03082) novel sequences described in the invention. The present sequence (Incyte ID No: 2387342dec) cencodes a cytoskeletal molecule. The dithp polynucleotides may be used to diagnose a condition disease or disorder associated with human molecules. They can be used to identify the presence of similar nucleic acids. Dithp polynucleotides may used to generate hybridisation probes for use in chromosomal mapping. Polypeptides (DITHP) encoded by dithp are used to screen for molecules which bind to them and modulate their activity Dithp polynucleotides can be used for gene therapy of disorders such as severe combined immunodeficiency syndrome (SCID), cystic fibrosis, thalassemia, haemophilia resulting from Factor VIII or IX deficiencies, cardiovascular disorders e.g familial hypercholesterolaemia (FH), cell proliferative disorders e.g. cancers, neurodegenerative disorders, and developmental disorders. The antibodies can be infectious disorders and developmental disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         499
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        262

                                                                                                                                      ò
                                                                                                                                                                                                                                                                               4
                                                                          is
                                                                                                                                                (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01876) and the encoded proteins
 cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        419 atgaactgcagaaggacaagaacctcacttgcaccgtcgaagtttcgtacttggaaattt 478

Detection of antibodies directed against this repeated unit in a patients sample is indicative of leishmaniasis. The antigenic repeat unit can itself be used as a vaccine to protect against infection by a leishmania parasite.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 57;

                                                                                                                                                                                                                                                                                                                                                                                                                            Compounds including polypeptides that contain at least an epitope of the L. chagasi acidic ribosomal antigen LcPO are useful in a variety of immunoassays for detecting Leishmania infection. Portions of LcPO (AAT42164) contg. at least the 17 C-terminal amino acids (AAT42165) have been found to generate a signal in an ELISA that is equivalent to that generated by the full length LcPO. A combination polypeptide may also be used, comprising an LcPO epitope along with an epitope derived from the Leishmania K39 antigen (AAT42166), pref. the K39 repeat unit antigen having the sequence given in AAW3166).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                              capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          747
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          747

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                          1 atgtcgggcggtggaaatat......aaacagcgaagcaggaattc 2352
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 18,

Sequence 38, Application US/09302812B

Patent No. 6333148

GENERAL INFORMATION:
APPLICANT: JACOBSON, Myron K.
APPLICANT: JACOBSON, Elaine L.
APPLICANT: JACOBSON, Elaine L.
APPLICANT: LIN, Winston
TITLE OF INVENTION: GENES ENCODING SEVERAL POLY(ADP-RIBOSE) GLYCOHYDROLASE (PARG)
TITLE OF INVENTION: THE PROTEINS AND FRAGMENTS THEREOF, AND ANTIBODIES IMMUNOREACT
TITLE OF INVENTION: THEREWITH
FILE REFERENCE: NIAD 201
CURRENT APPLICATION NUMBER: 05/09/302,812B
CURRENT FILING DATE: 1999-04-30
EARLIER APPLICATION NUMBER: 60/083,768
EARLIER FILING DATE: 1998-05-01
NUMBER OF SEQ ID NOS: 38
SEQ ID NO 38
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      648

CDNA library was prepared and sequenced in Mouse Genome Exploration Research Group in Riken Bncyclopedia Project of Genome Exploration Research Group in Riken Division of Experimental Animal Research in Riken contributed to prepare mouse Lissues. First strand CDNA was primed with a primer [5, GAGAGAGAGAGACACTCTATTTTTTTTTTTTTTTYN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. CDNA went through two rounds of normalization to Rot = 20.0 and subtraction adapter of sequence [5].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission
